

PharmaSight™ Autonomous Discovery - Quick Start Guide

Get started in 5 minutes!

Prerequisites

-  Python 3.8+
 -  OpenAI API key
 -  Git access to pharmasight-platform
-

Step 1: Setup (2 minutes)

Bash

```
# Navigate to project
cd /home/ubuntu/pharmasight-platform

# Checkout Replit-December branch (if not already)
git checkout Replit-December

# Set your OpenAI API key
export OPENAI_API_KEY="your_openai_api_key_here"

# Make it permanent (optional)
echo 'export OPENAI_API_KEY="your_key"' >> ~/.bashrc
```

Step 2: Test Run (1 minute)

Bash

```
# Run a quick test
python3 test_autonomous_system.py
```

Expected output:

Plain Text

- ✓ OpenAI Research Engine: Active
- ✓ Research Article Database: 0 articles
- ✓ Discovery Log: 0 total discoveries

[1/2]: # "Scanning: treatment-resistant depression"

- ✓ Found 4 compounds
- ✓ Scanned clinical trials

SCAN RESULTS SUMMARY

Discovered Compounds: 5

Research Findings: 4

- ✓ Test completed successfully!

Step 3: Schedule Daily Runs (1 minute)

Bash

```
# Setup daily automated scanning at 9:00 AM
./setup_daily_schedule.sh
```

Expected output:

Plain Text

- ✓ Cron job added successfully!

The autonomous discovery system is now scheduled to run daily at 9:00 AM.

Step 4: View Results (1 minute)

Bash

```
# View discovered compounds
cat data/autonomous_discoveries.json | jq
'.discoveries[0].discovered_compounds'

# View research log
cat data/openai_research_log.json | jq '.queries[-1]'

# View article database
cat data/RESEARCH_ARTICLES_DATABASE.json
```

That's It!

Your autonomous discovery system is now running daily!

What Happens Next?

Every day at 9:00 AM, the system will:

1. **Scan** 5 therapeutic areas for novel compounds
2. **Discover** new drug candidates from latest research
3. **Analyze** clinical trials and patent landscapes
4. **Log** all findings to JSON databases
5. **Generate** reports in `data/cycles/`

View Daily Logs

Bash

```
tail -f logs/daily_discovery.log
```

Manual Run Anytime

Bash

```
python3 run_daily_discovery.py
```

Customization

Change Therapeutic Areas

Edit `src/autonomous_discovery_system.py` :

Python

```
self.default_therapeutic_areas = [  
    "your custom area 1",  
    "your custom area 2",  
]
```

Change Schedule Time

Edit `setup_daily_schedule.sh` :

Bash

```
# Change from 9:00 AM to 2:00 PM
CRON_ENTRY="0 14 * * * .."
```

Then re-run:

Bash

```
./setup_daily_schedule.sh
```

Troubleshooting

"API key not set"

Bash

```
export OPENAI_API_KEY="your_key_here"
```

"Module not found: openai"

Bash

```
sudo pip3 install openai
```

Cron job not running

Bash

```
# Check if it exists
crontab -l

# Test manually
python3 run_daily_discovery.py
```

Next Steps

 Read full documentation: `AUTONOMOUS_DISCOVERY_README.md`

 Explore discovered compounds: `data/autonomous_discoveries.json`

 View research findings: `data/openai_research_log.json`

 Check scheduled runs: `crontab -l`
